Practo Ecosystem

Practo Business Model

Practo's Key Value Proposition

User Persona

Vinod Patel

Age: 63

Occupation: Retired Bank Manager

Location: Bangalore, India

"Want to be independent when it comes to their health decisions and care"

Bio

Mr. Vinod is a retired Bank Manager from a very reputed Bank. Has worked for almost 45 years. He is a Sugar Patient and requires to take medications on time and get weekly and monthly checkups. His proficiency in using smart phones is moderate.

Needs

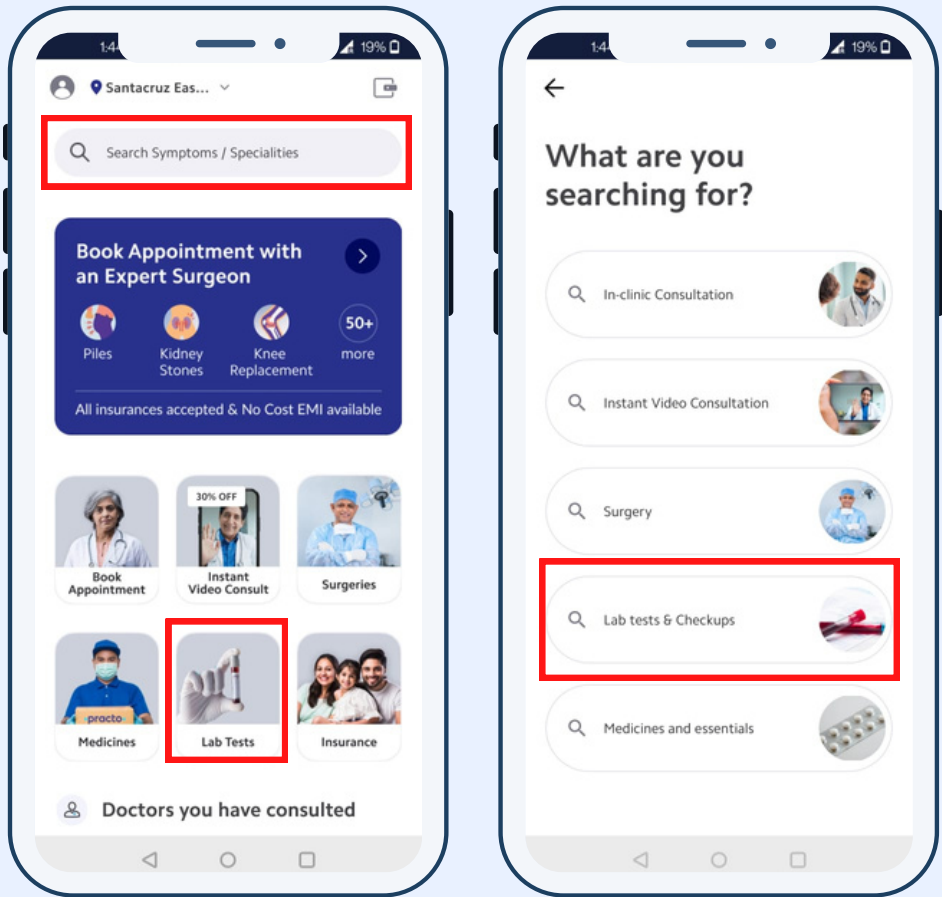

- Want to be able to book his tests at the ease of home.
- Is very keen on the organization. Always keeps his medical reports in a file.
- To be able to provide samples at home. Will pay extra if needed, comfort before cost.

Pain Points

- There are a lot of apps for all activities which confuse him.
- Forgets about the weekly checkups sometimes.
- Doesn't like to interact with the Insurance customer services, finds it annoying.

User Journey

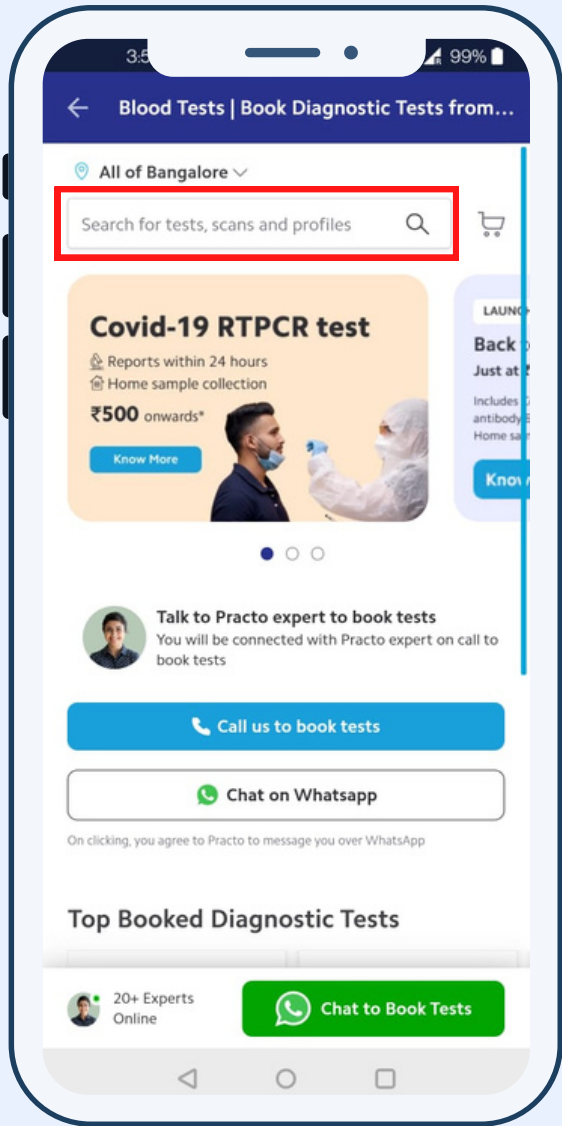

User searching for Lab Test

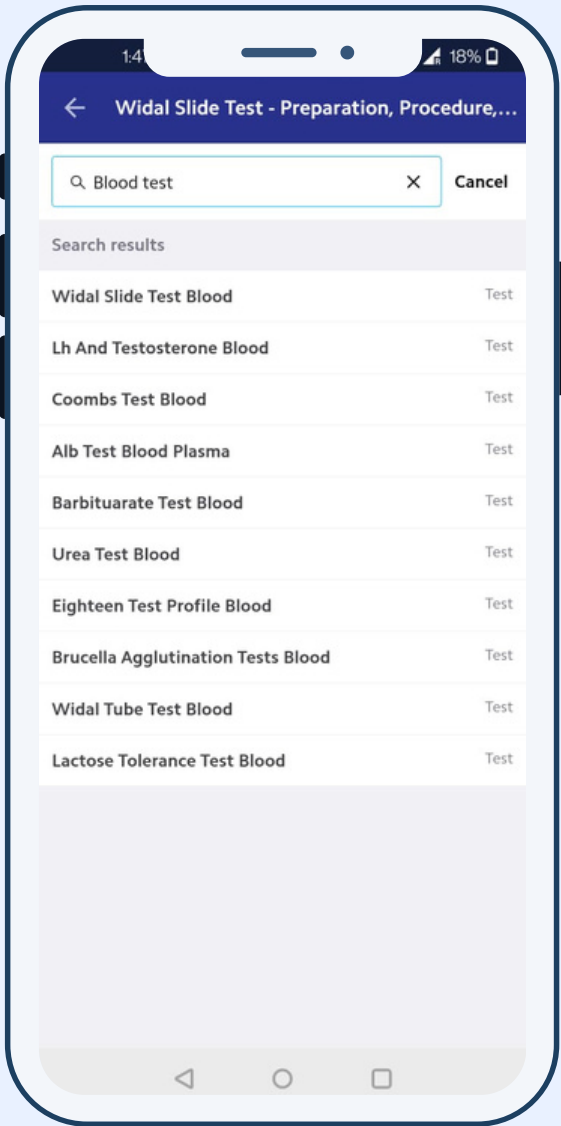

- [A] The user comes on the screen. There are two options to go to the Lab test screen.
- Search bar – Clicking on the search bar gives five pre-defined paths for the user to go into. One is Lab tests and checkups.
 - Lab Test button

[B] Both ways take the user to the same screen

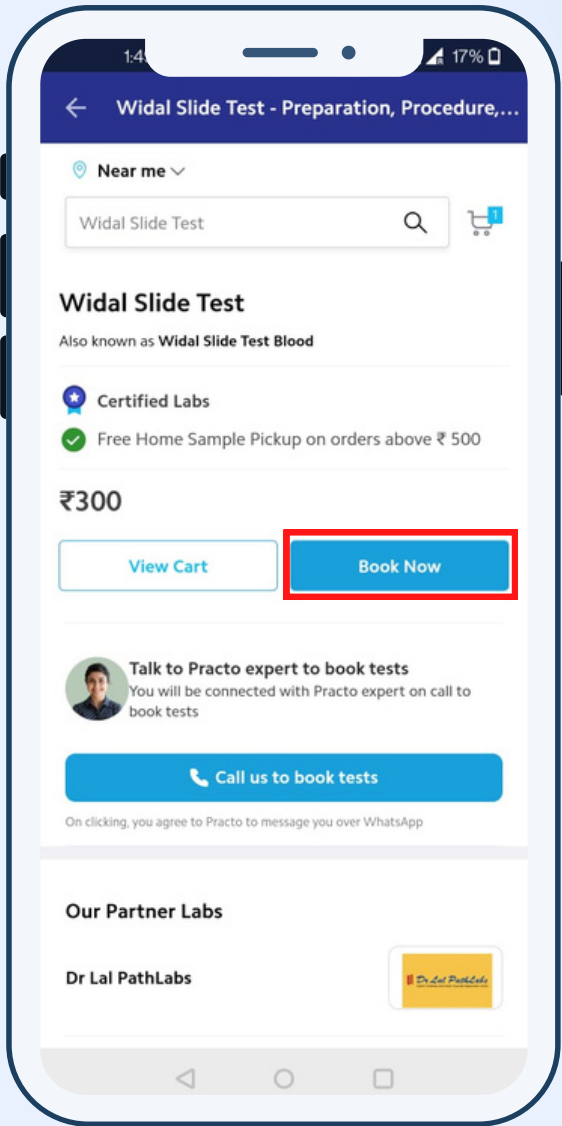

Finding the required test

The Lab test page provides information about the most booked tests. User can contact the experts for assistance in booking a test in nearby diagnosis centres

By searching on the bar, it shows a list of the related test. It opens the topmost result suggested by the app. User has to write the exact test name for it to search.

The test information screen has detailed info on the test like the price of the test, Partner labs, and general FAQ s related to the test.

Offers and affordable prices

Get great discounts and offers on tests and packages.

What is this test?

This test helps to diagnose enteric fever or typhoid fever caused by microorganisms like Salmonella typhi, Salmonella paratyphi A, B, C. In this test, the blood of an individual reacts with the Salmonella antigens on slide and forms agglutination (clumping) or not.

What are Antibodies?

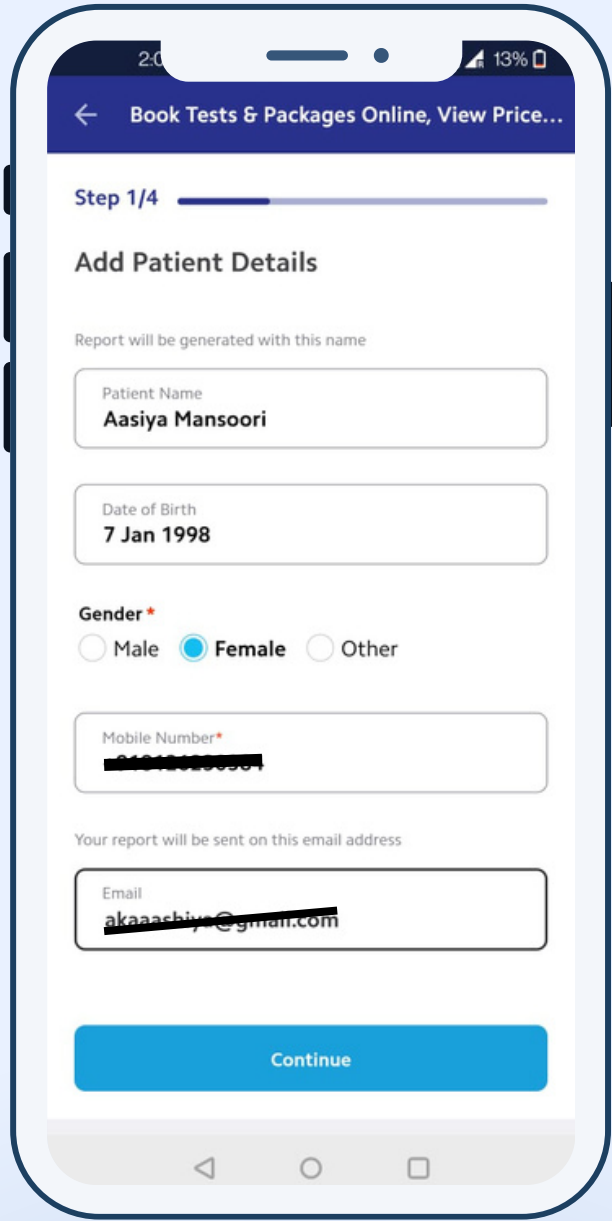

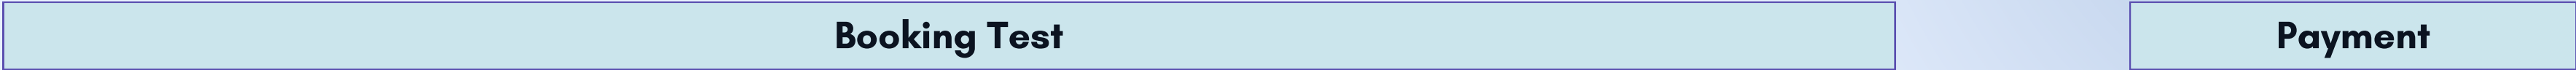

Antibodies are the protective proteins produced by the immune system and also known as immunoglobulins. Antibodies are produced when any foreign substance or virus or bacteria enters into the body. These foreign substances are known as antigens. Antibodies recognize and attach to the antigens in order to remove them from the body.

Typhoid fever is a bacterial infection caused by Salmonella typhi and grows in the intestine and blood. During infection, patients body produces antibodies against Salmonella typhi O and H and Salmonella paratyphi AH and BH antigens.

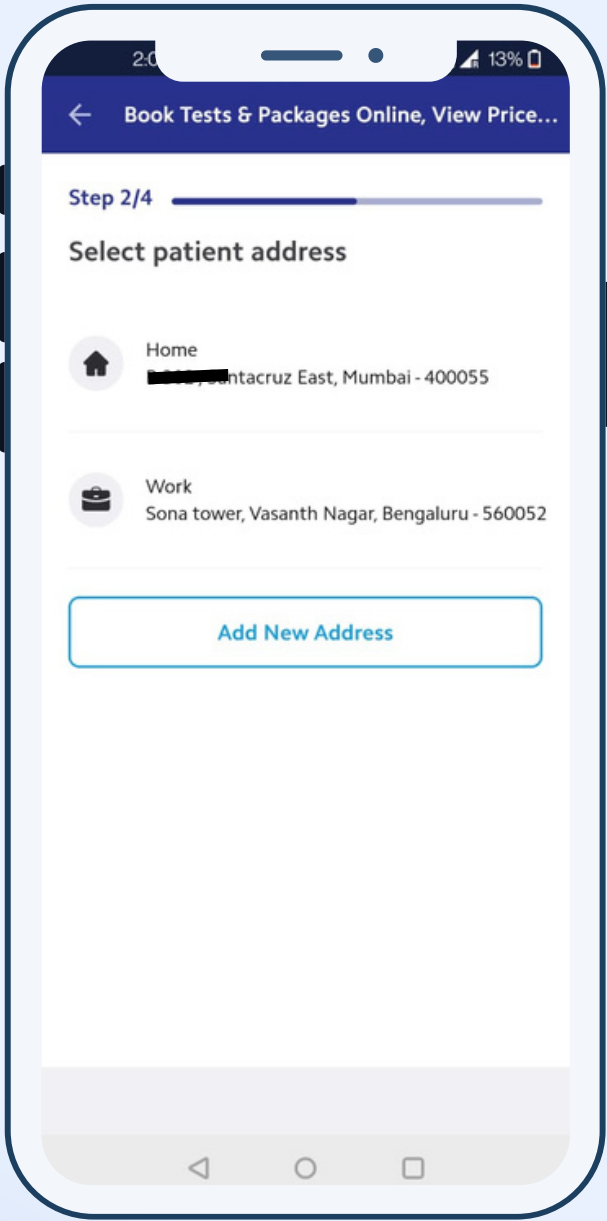

Why this test is performed?

This test is performed to check the presence of Salmonella species antibodies in the blood. It also helps to diagnose enteric fever or typhoid fever caused by microorganisms like Salmonella typhi, Salmonella

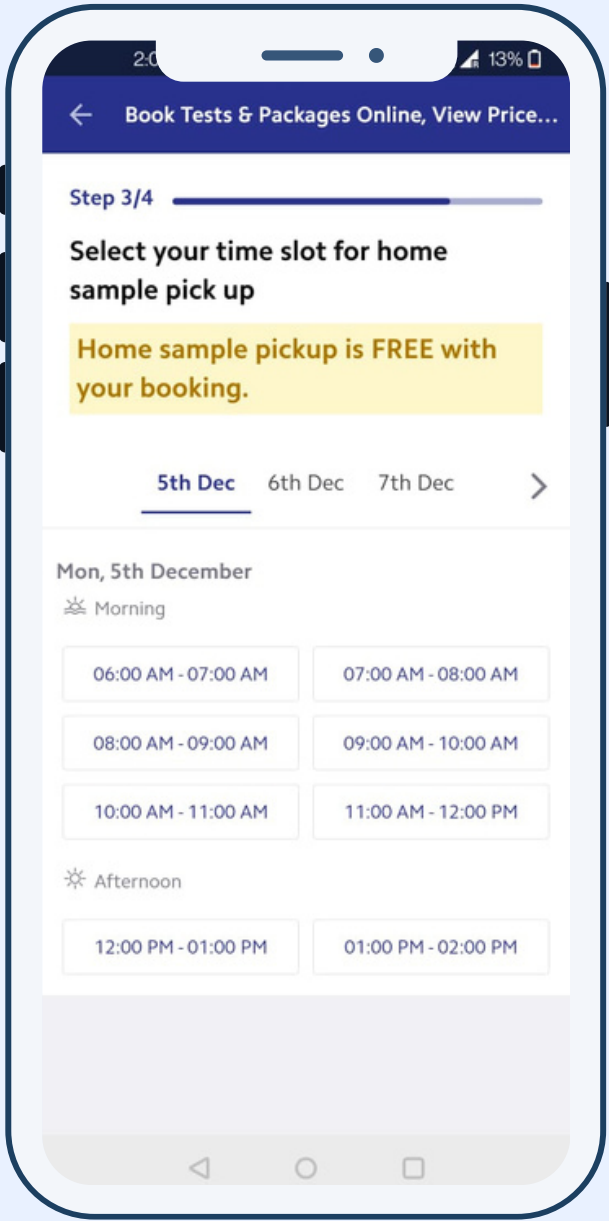

User Journey

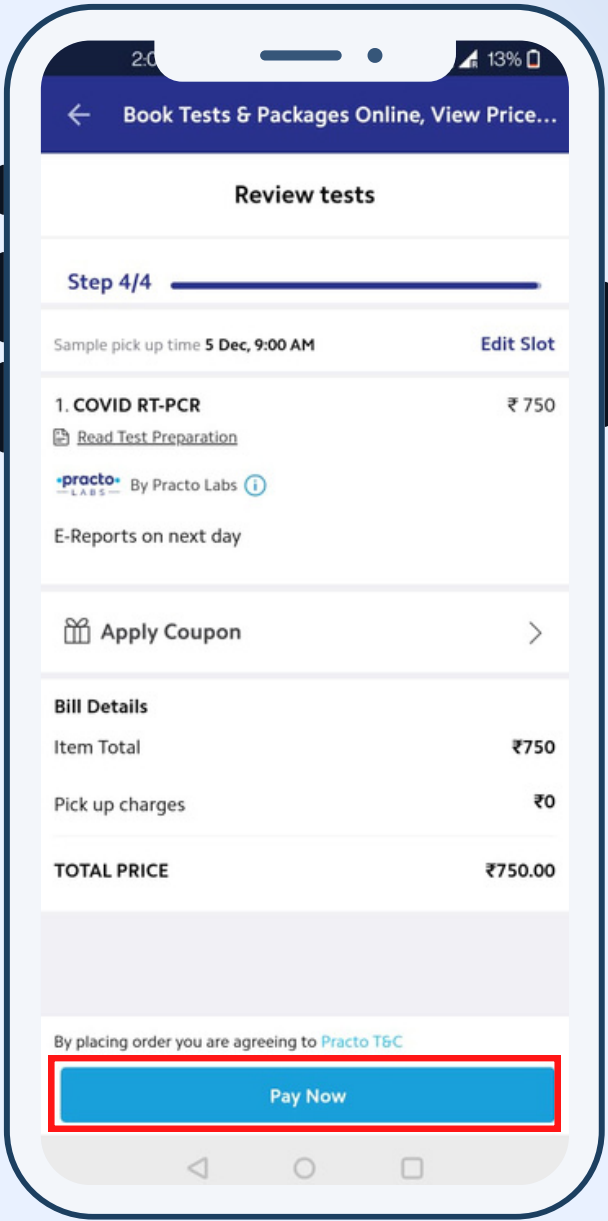

Step 1:
Fill in personal details.

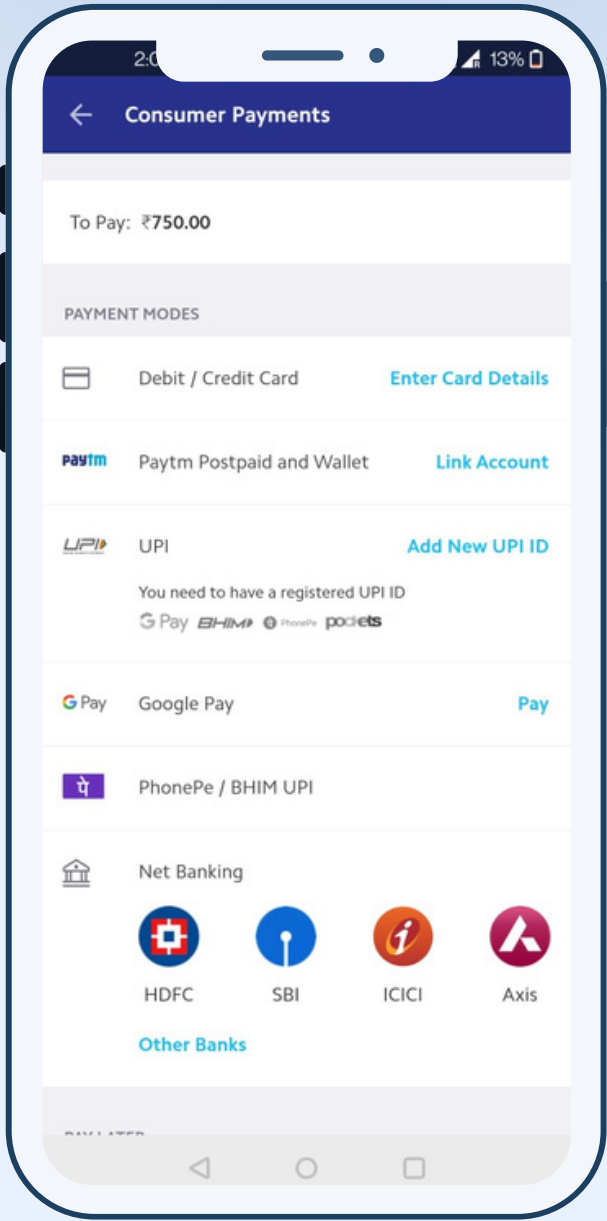

Step 2:
Select the address.

Step 3:
Select a suitable slot for
the sample collection

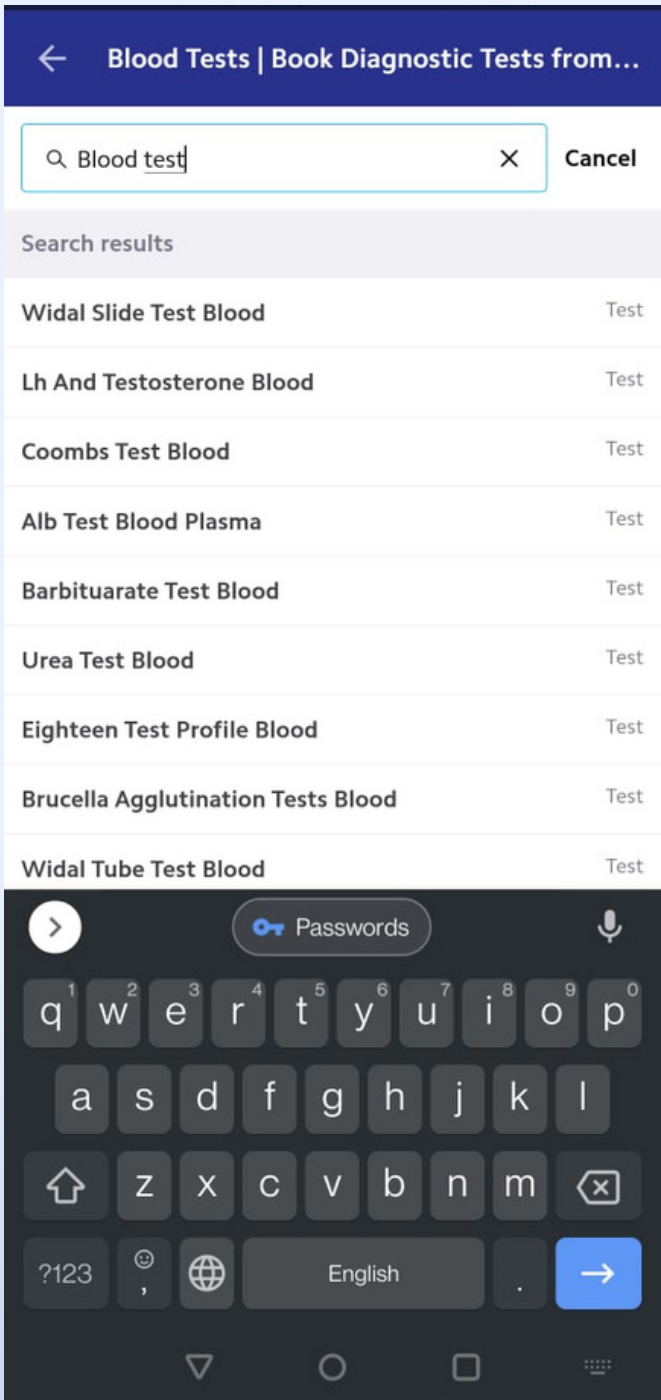

Step 4:
Test details and payment
information.

User selects the require payment
gateway.
The user is then taken to the
payment gateway.

Improvements

Searching can be improved by adding some screens to the flow

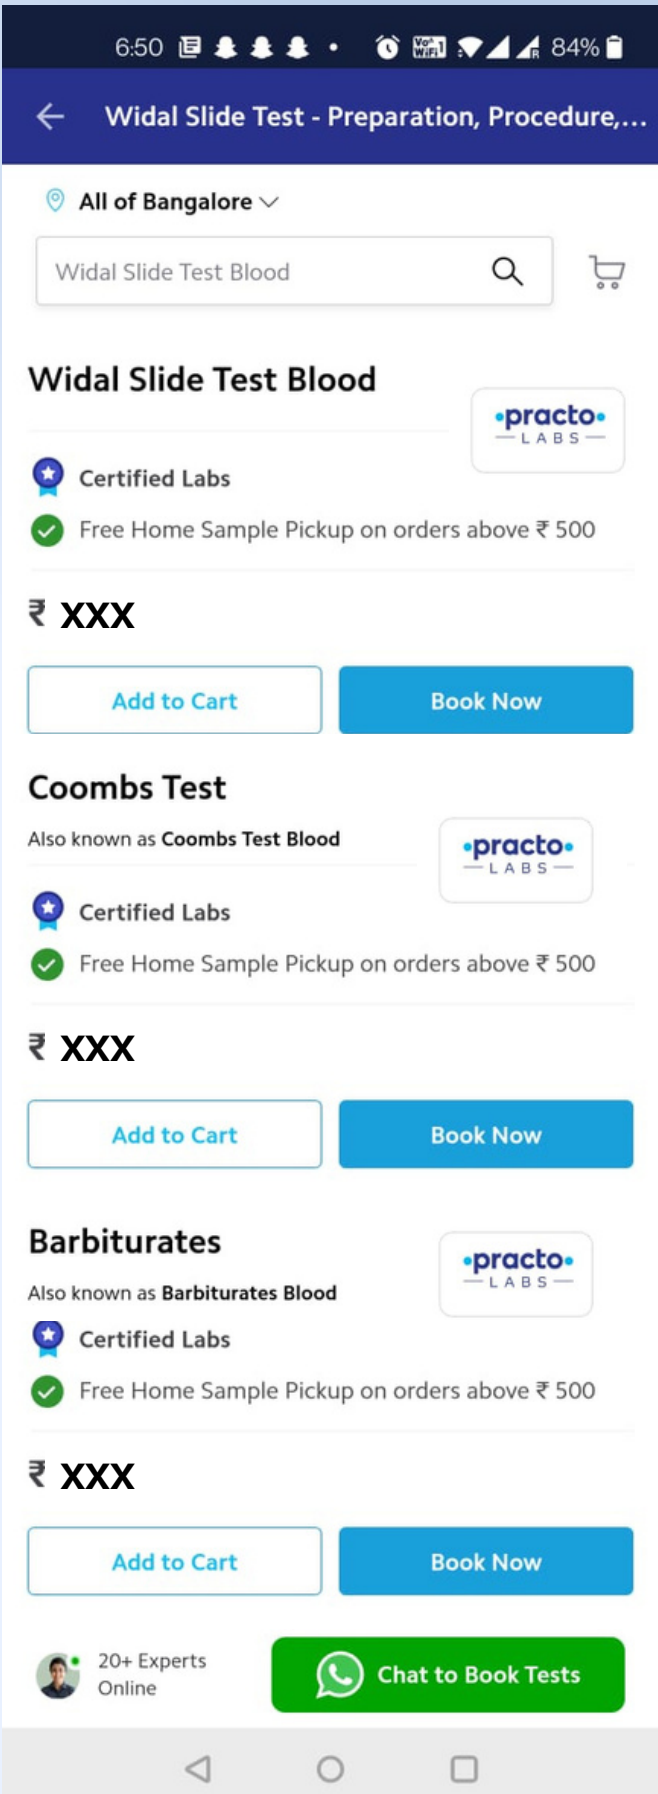

Problem

- When a user searches for a test, the results are shown according to the name of the test.
- When the user proceeds by clicking on the right arrow, they expect a list of all the related tests available.
- Instead the topmost test is opened.

Possible solution

- Another screen can be added where the related tests to the query are mentioned.
- Gives the user a wider perspective of what is available to book.

Metrics

L2 Metric	Measures how many people are booking tests regularly.
% of users returning back to book a test weekly/ monthly	
L1 Metric	Measures the no. of tests being conducted successfully
Completion rate of the lab tests	
North Star Metric	Measure the increase in cart value
No. of Lab test order booked
